MARIANO MARCOS STATE UNIVERSITY: PROTECT YOUR DIGITAL IDENTITY

Figure 1: Webinar

On April 17, 2026, I, Sk Briddon T. Dumlaio, attended a 2.5-hour webinar titled **“Protecting Your Digital Identity,”** organized by the Mariano Marcos State University. The webinar was conducted from 3:30 PM to 5:00 PM and featured Gale Rigel Domingo and Cristine Mamba as the resource speakers.

The primary objective of the webinar was to educate students and participants about the significance of safeguarding one’s digital identity, the different methods used by cybercriminals to collect personal data, and the preventive measures that individuals can implement to secure their information. The discussion emphasized that in today’s digital age, a person’s digital identity has become an essential component of daily life, influencing communication, academic work, financial transactions, and social interactions. It was highlighted that our digital identity often represents who we are in online environments, making its protection a critical responsibility for every internet user.

During the webinar, several relevant topics were presented that strengthened my understanding of digital identity protection and cybersecurity awareness. The session began with an introduction to the meaning of Digital Identity, explaining that it refers to the collection of personal data and online activities associated with an individual, such as social media accounts, login credentials, browsing behavior, and digital footprints. I learned that even simple actions like posting updates, sharing photos, or interacting with online platforms can contribute to a permanent digital record that may affect one’s reputation and security. This part of the discussion helped me realize how important it is to be mindful of the information I share online and how it can be accessed or misused by others.

As the webinar progressed, the speakers discussed various cyber threats that individuals commonly encounter in the digital environment, including phishing

attacks, identity theft, malware infections, and social engineering tactics. They explained how attackers often exploit human behavior, curiosity, or lack of awareness to gain unauthorized access to sensitive information. The webinar also highlighted the importance of practicing strong password management, such as creating complex passwords, avoiding password reuse across multiple platforms, and enabling additional security measures like multi-factor authentication to strengthen account protection.

Another significant part of the webinar focused on responsible use of social media and the importance of managing privacy settings to control the visibility of personal information. The speakers also introduced the concept of data privacy and discussed the responsibilities of individuals in protecting their own data, as well as the role of organizations in ensuring secure data handling practices. In addition, the session addressed the increasing number of online scams and fraudulent activities, emphasizing the need to verify sources, avoid clicking suspicious links, and remain cautious when sharing confidential information online.

Figure 2: Issuing of Certification

On **April 27, 2026**, the Mariano Marcos State University officially issued me a **Certificate of Participation** for successfully attending the webinar titled **“Protect Your Digital Identity.”** This certificate serves as formal recognition that I actively participated in and completed the webinar session, demonstrating my engagement in learning about the importance of cybersecurity awareness and responsible digital practices.

Receiving this certificate signifies that I have fulfilled the requirements set by the organizers for participation in the webinar and have gained knowledge and awareness regarding the protection of personal information in digital environments.

It also reflects my initiative to enhance my understanding of current issues related to online safety, data privacy, and the responsible use of technology, which are essential skills for students and future professionals in today's technology-driven society.

Furthermore, the issuance of this certificate provides documented evidence of my involvement in professional and academic development activities beyond regular coursework. It highlights my commitment to continuous learning and my willingness to participate in educational programs that promote digital responsibility, cybersecurity awareness, and the protection of one's digital identity.

ETHEL PROGRAMMING COMPUTER PROGRAMMING SERVICES: APIs and Fetch

Figure 1: Webinar

On **March 29, 2026**, I, **Sk Briddon T. Dumlao**, attended a **one-hour webinar** titled **“APIs and Fetch,”** organized by Ethel Programming Computer Services. The session was held from **7:00 PM to 8:00 PM** and featured **Seiji Ralph** as the resource speaker.

The main objective of the webinar was to guide participants in understanding how modern applications retrieve and handle real-time data through APIs. It focused on the fundamentals of API usage, particularly how the **fetch process** enables a web application to communicate with external servers and obtain dynamic data. The discussion also emphasized how APIs serve as bridges between different software systems, allowing seamless data exchange in modern web development.

In addition, the webinar explained how to properly design and use **endpoints**, as well as how to structure and manage **routes** in an application. It provided insights into how requests are sent and received, how responses are processed, and how developers can ensure that data retrieval is efficient and organized. Overall, the

session helped strengthen my understanding of how APIs function in real-world applications and how they are essential in building responsive, data-driven systems.

Figure 2: Certificate

On March 29, 2026, I, Sk Briddon T. Dumlao, attended a one-hour webinar titled “APIs and Fetch,” organized by Ethel Programming Computer Services. The session ran from 7:00 PM to 8:00 PM and featured Seiji Ralph as the resource speaker.

Following my participation in the webinar, a Certificate of Participation was issued to me as official proof of completion and attendance. This certification recognizes my engagement in the session and validates my understanding of the topics discussed, particularly in relation to API integration and data handling in modern web applications.

The webinar primarily focused on how applications retrieve and process real-time data through APIs. It provided a detailed discussion on the fetch process, explaining how web applications communicate with external servers to request and receive dynamic data. The speaker also highlighted the role of APIs as communication bridges between different systems, enabling efficient and structured data exchange in web development.

Furthermore, the session covered the importance of properly designing endpoints and organizing routes within an application to ensure smooth request handling and response processing. It also emphasized how developers can manage

API calls effectively to maintain clean, reliable, and scalable systems. Overall, the webinar strengthened my understanding of how APIs function in real-world development and how they contribute to building interactive and data-driven applications.

NATIONAL TEACHERS COLLEGE: INFORMATION AND DIGITAL SECURITY

Figure 1: Zoom Meeting

On **April 28, 2026**, I, **Sk Briddon T. Dumlao**, attended a **two-hour webinar** titled **“Information and Digital Security: Strengthening the Knowledge within the Legal Framework,”** organized by the National Teachers College. The webinar was conducted from **9:00 AM to 11:00 AM** and featured **Fiscal Lilian Doris S. Alejo**, a professional lecturer affiliated with the Supreme Court of the Philippines Judicial Academy and the Department of Justice (Philippines), as the resource speaker.

The primary objective of the webinar was to enhance participants' understanding of the legal foundations surrounding information security and digital safety. It focused on key Philippine laws such as the Cybercrime Prevention Act and the Safe Spaces Act, emphasizing how these legal frameworks are applied in addressing online offenses, protecting individuals in digital environments, and promoting responsible behavior in both physical and virtual spaces.

Figure 2: Discussion

During the discussion, the speaker elaborated on various forms of cyber-related offenses, including online harassment, identity theft, illegal access to information systems, and other violations covered under existing cybercrime legislation. The session also highlighted the importance of awareness regarding digital rights and responsibilities, particularly in ensuring that individuals understand the legal consequences of improper or harmful online activities.

In addition, the webinar provided insights into how the law protects individuals from abuse and discrimination, both online and offline, through the Safe Spaces Act. It emphasized the significance of creating safer digital environments where users can interact without fear of harassment or exploitation. Overall, the webinar strengthened my understanding of how legal frameworks play a crucial role in maintaining order, accountability, and security in the digital world.

Figure 3: Certificate

Following my participation in the webinar, a **Certificate of Participation** was officially issued to me by the National Teachers College as proof of my attendance and completion of the session. This certification serves as formal recognition of my active involvement in the webinar titled *"Information and Digital Security: Strengthening the Knowledge within the Legal Framework,"* and validates my engagement in discussions related to cybersecurity laws, digital safety, and legal responsibilities in the online environment.

The issuance of this certificate signifies that I have successfully met the requirements set by the organizers for participation and have gained relevant insights from the lecture delivered by Fiscal Lilian Doris S. Alejo. It also reflects my commitment to expanding my knowledge in information security and understanding the legal frameworks that govern digital behavior in the Philippines.
